

**Why, AI.**

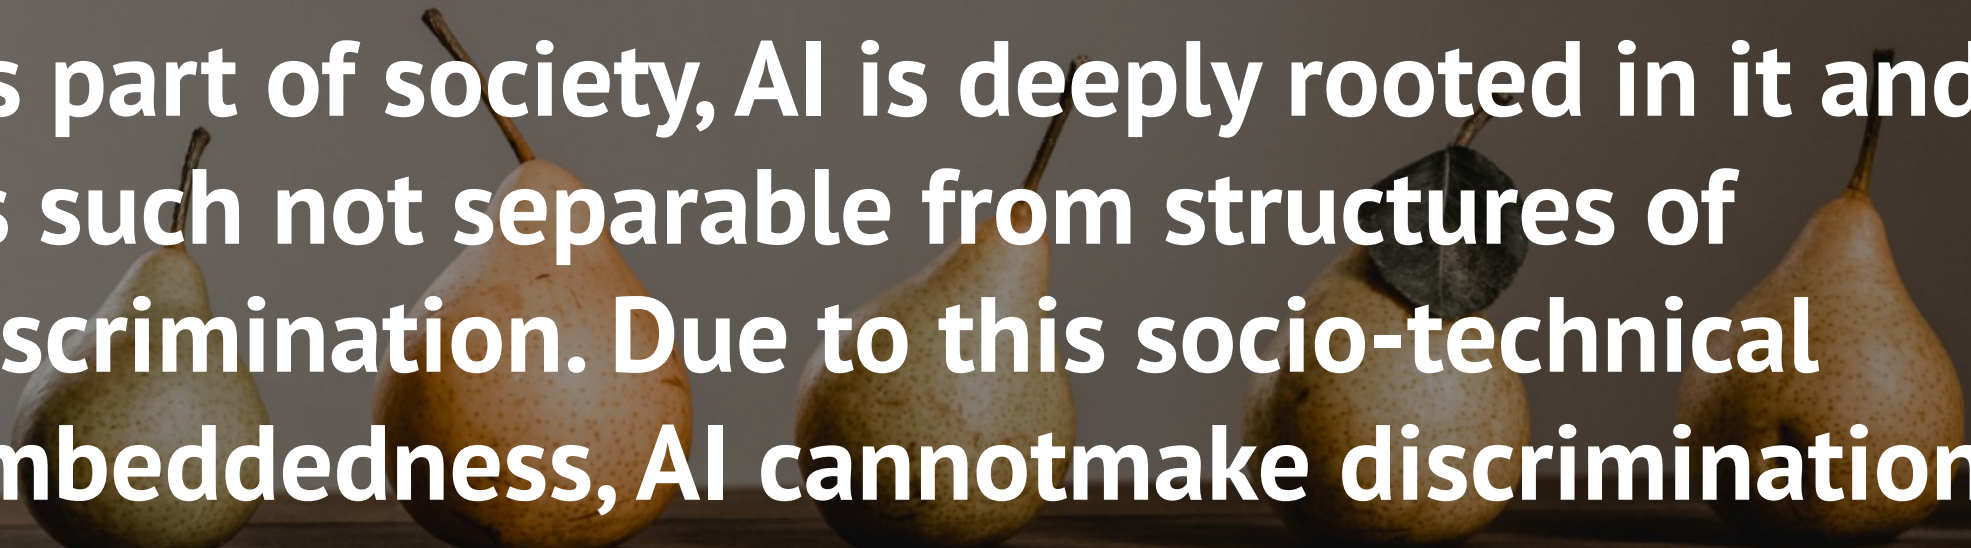

**BUSTED**  
MYTH

A still life photograph of five pears of different sizes and colors (green, yellow, brown) arranged in a row on a wooden surface. The pears are positioned behind the text.

**AI will end discrimination.**

**MYTH**

A row of five pears with brown and green mottled skin, some with small leaves, resting on a dark wooden surface. The background is a dark, textured grey.

**As part of society, AI is deeply rooted in it and as such not separable from structures of discrimination. Due to this socio-technical embeddedness, AI cannot make discrimination disappear by itself.**

**BUSTED**  
MYTH

## Artificial Intelligence ends discrimination, doesn't it?

Instead, Artificial Intelligence seems to make better choices than people.

Well, at least, Artificial Intelligence does not judge people by their status...

...because Artificial Intelligence can be instructed in a way to treat all equal people/groups equally.

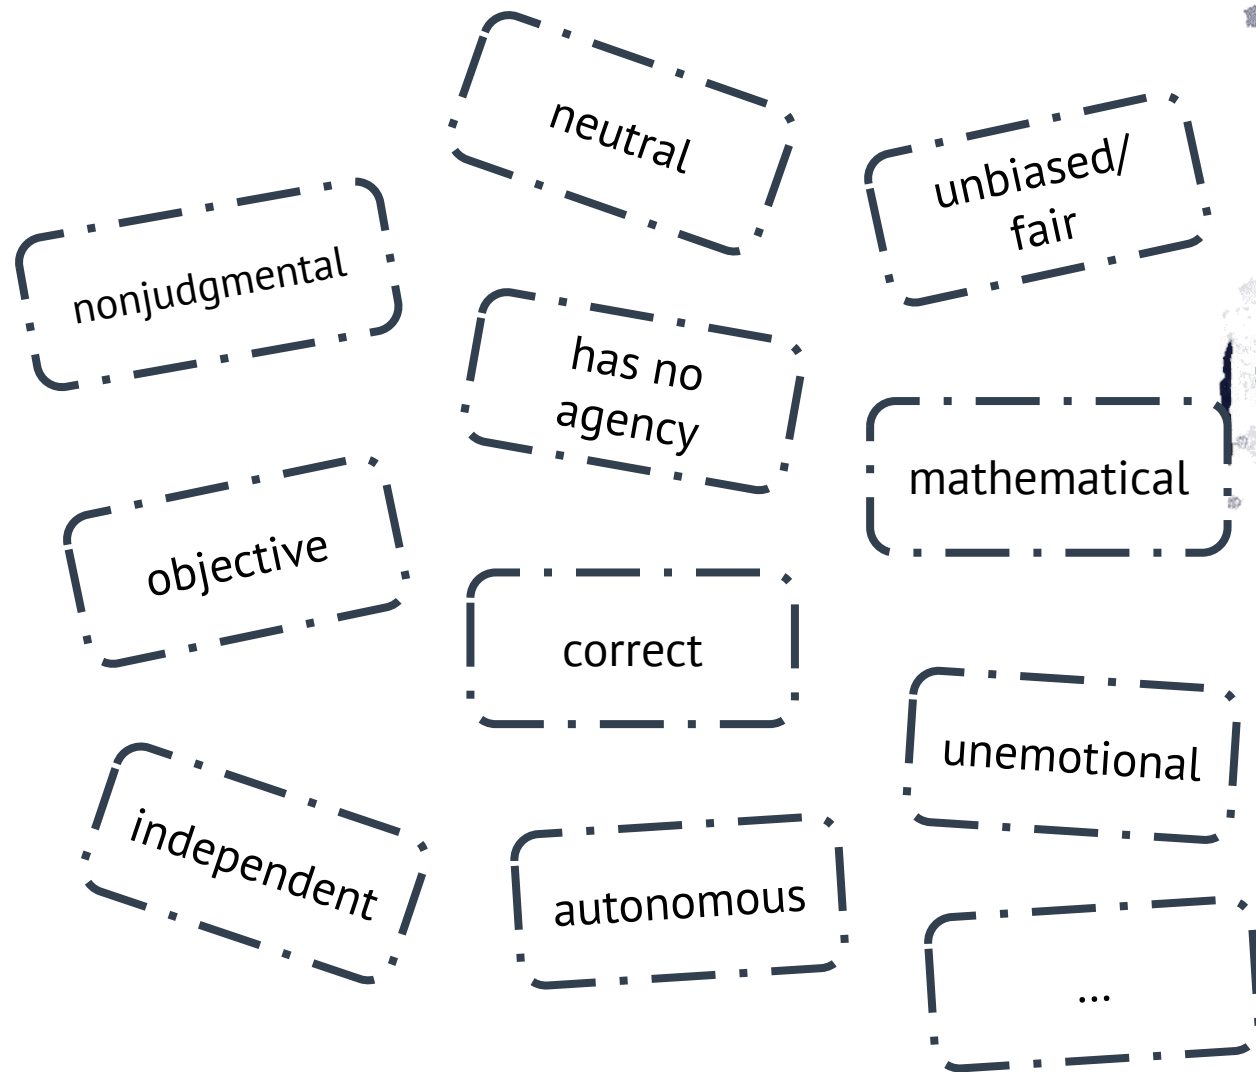

Hmm. Unlike me, other people are so emotional, moody, unfair, fallible.

Thus, can AI end discrimination in the world?

## What is AI?

*„Intelligence demonstrated by machines“ (Wikipedia)*

- Originally: A field of study
- Today: Anything between science-fiction dys-/utopias and technologies exhibiting reasoning
- Here: Data-driven (semi-)automatic decision-making systems

# AI gone wrong

Overcoming Racial Bias In AI Systems And Startlingly Even In AI Self-Driving Cars

## AI expert calls for end to UK use of 'racially biased' algorithms

### Gender bias in AI: building fairer algorithms

### Millions of black people affected by racial bias in health-care algorithms

Study reveals rampant racism in decision-making software used by US hospitals – and highlights ways to correct it.

Google 'fixed' its racist algorithm by removing gorillas from its image-labeling tech

### The Best Algorithms Struggle to Recognize Black Faces Equally

US government tests find even top-performing facial recognition systems misidentify blacks at rates five to 10 times higher than they do whites.

Racial bias in a medical algorithm favors white patients over sicker black patients

### AI Bias Could Put Women's Lives At Risk – A Challenge For Regulators

### Bias in AI: A problem recognized but still unresolved

Amazon, Apple, Google, IBM, and Microsoft worse at transcribing black people's voices than white people's with AI voice recognition, study finds

### When It Comes to Gorillas, Google Photos Remains Blind

Google promised a fix after its photo-categorization software labeled black people as gorillas in 2015. More than two years later, it hasn't found one.

# AI „in the wild“

Aha! AI “in the wild”, like outside a laboratory environment or outside of some programmer geniuses’ garages is *pretty* discriminatory, sometimes even worse than humans.

## OUR CLASSIFIERS

High IQ

Academic Researcher

Professional Poker  
Player

Terrorist

Utilizing advanced machine learning techniques we developed and continue to evolve an array of classifiers. These classifiers represent a certain persona, with a unique personality type, a collection of personality traits or behaviors. Our algorithms can score an individual according to their fit to these classifiers.

# What now? Emancipatory AI or burn it?

## AI...

- ... is not separable from the socio-political
- ... will not *fix discrimination*
- ... *encodes* social inequalities

# What now? Emancipatory AI or burn it?

*“I argue that tech fixes often hide, speed up, and even deepen discrimination, while appearing to be neutral or benevolent when compared to the racism of a previous era. This set of practices that I call the **New Jim Code** encompasses a range of discriminatory designs – some that explicitly work to amplify hierarchies, many that ignore and thus replicate social divisions, and a number that aim to fix racial bias but end up doing the opposite” (Ruha Benjamin, Race after Technology, 2020, p. 9)*

# What now? Emancipatory AI or burn it?

## AI...

- ... needs a socio-technical *decoding*
- ... may serve as a proxy to discuss deeply rooted societal inequalities

# Why discrimination cannot just end

- **Discrimination is no “irrational” wrongdoing** based on individual choices whether these choices are made by an individual or an AI.
- **Discrimination is a structural, systematic phenomena.** Different modes of discrimination like class, racism, sexism, antisemitism, patriarchy cannot be abolished or altered by individual (conscious or unconscious) choices.
- **Understanding AI from an intersectional sociotechnical perspective means:** A ‘fair’ AI can treat equal individuals or groups equally, but it still is embedded into wider social structures of discrimination and oppression and does not imply a certain treatment is just.

## What AI scientists and practitioners can do

- ❖ **Sociotechnical embedding:** AI & related technologies
- ❖ **Democratization:** Inclusion of all stakeholders, especially the persons affected by the AI
- ❖ **Design:** Participatory and inclusive
- ❖ **Public Ownership:** Data & digital infrastructures
- ❖ **Open Science:** Transparency & comprehensibility
- ❖ **Self-Reflection:** on your situating in the world

## What we can do

- ❖ Let's educate ourselves and enhance our digital literacy (like you do, right now!)
- ❖ Support algorithmic watchdogs
- ❖ Have a public debate around the areas in which AI should be deployed.

**There is no technical fix for discrimination.**

**Fight or support fights against discrimination in all parts of society.**

# Thank you.
